

It is very important that all the coals are used and arranged as shown in order to achieve the desired flame picture.

It may be necessary to remove some or all of the coals to clean them at some time. Cleaning must only be done using a soft brush.

CAUTION: The coals are extremely fragile and must be handled accordingly. Gloves should be worn and any inhalation of dust should be avoided. The coals must be kept away from children at all times. Never put additional coals on the fire. Never use coals other than those originally supplied, or genuine Legend Spare Parts.

1. Place the rear coal on the rear ceramic retainer ledge in a central position (Fig. 11).

2. Place the main fuel bed on to the middle section of the metal burner tray. It is important that the front edge of the fuel bed is located behind the burner strip (Fig. 12).

3. Position the front coal on the front ceramic retainer, making sure that the back edge is pushed up against the front of the burner strip (Fig. 13).

4. Place the side cheeks into position, making sure they are positioned either side of the fuel bed and the overhang is at the front. The outside edge should be in contact with the radiant box ceramic liner. Ensure that the lower part of the side cheeks sit on the front coal and are in front of the rear coal (Fig. 14).

Fig. 17

5. Pick out the smallest two coals and lay to one side, lay the first row of four loose coals on top of the front coal. Ensure the back of the coals are resting on the coal bed and there are even gaps all round (Fig. 15).

6. Choose three loose coals and place them in line on the next row up, again making sure all the gaps are even. It is important that the coals 'bridge' the peaks of the fuel bed and are not placed in between. This helps the flow of burnt gases and should give an even glowing fuel bed (Fig. 16).

7. Lay another row of four coals on the next row up, again making sure all the gaps are even (Fig. 17).

8. Place the next three coals in the middle, on the back edge of the coals previously laid ensuring even gaps all round. Finally place the two small coals, one in each top corner. Make any adjustments necessary to achieve even gaps as this will help in giving a well-balanced flame picture and an even glow (Fig. 18).
